

Photos of damage to roses in the Bradenton—Sarasota region in 2010

Photo of severe damage submitted to ASK A CR

Note white canker damage submitted to ASK A CR

Above, dieback progresses both down and up (Photo Phil Paul)

On left, note dieback pattern on top branch and purple color progression which precedes the dieback. A similar pattern on the middle branch Photo V Celeste

The photo on the left shows three cut stems on edge. The middle one is a "bad" cut since the infection is present. The one on the left is also bad and has a slight infection. The infection in the core of the cane matches the infection on the exterior. The right most cut is the good one - it is "clean" Also note the purple color on a lower cut piece. Photo by V. Celeste

Note Canker and the Ridges on infected stem in early stages Photo by Connie Vierbicky

Pale "circles" on a members rose leaves below left (Photo by V Celeste)

Compared to picture below of downy mildew on grape leaves
